^ "Horse nappy plan given go-ahead". Tampa Bay Times. Here is an extract from 'The Modern Home Doctor' written by physicians in the UK in 1935. "The report shows that, in contrast to the use of disposable nappies, it is consumers' behaviour after purchase that determines most of the impacts from reusable nappies. Adult users can include those of advanced age, patients bed-bound in a hospital, individuals with certain types of physical or mental disability, and people working in extreme conditions, such as astronauts. Single-use diapers consume less water than reusables laundered at home, but more than those sent to a commercial diaper service. Uspharmaacist.com. This meaning of the word has been in use since the 1590s in England. Time. Basic layers are an outer shell of breathable polyethylene film or a nonwoven and film composite which prevents wetness and soil transfer, an inner absorbent layer of a mixture of air-laid paper and superabsorbent polymers for wetness, and a layer nearest the skin of nonwoven material with a distribution layer directly beneath which will transfer wetness to the absorbent layer. By the 19th century, baby diapers were being sewn from linen, giving us the modern-day reading of the word "diaper" [3] This usage stuck in the United States and Canada following the British colonization of North America, but in the United Kingdom, the word "nappy" took its place. Retrieved April 9, 2013. Main article: Adult diaper Although most commonly worn by and associated with babies and children, diapers are also worn by adults for a variety of reasons.
